ASHKHABAD, 1958

Dear Aunt Panagrellus,

It is hot here, with sand to the horizon, and a professor keeps collecting us in little jars. He says he will make a preparation from the fungi.

Honestly. I, for one, am not crawling into any rings.

Kisses, your Worm.

Fictional correspondence and an imagined itinerary; not an experimental chronology.

TASHKENT, 1975

Greetings from the capital!

Someone has defended a dissertation featuring me. I thought I was in the bibliography. No: I am in the materials section.

159 pages, and not a good word about me.

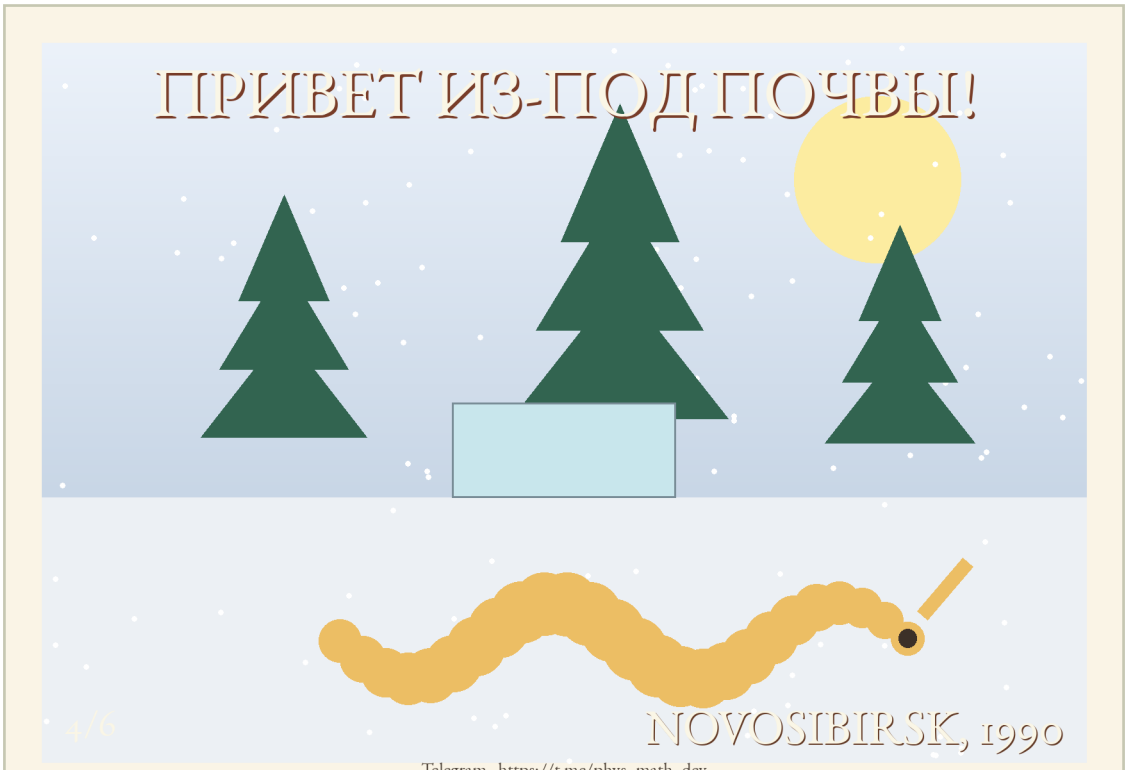

The domes are turquoise, though. Yours, W.

BAKU, 1979

The sea! The wind! A whole book about things that eat us!

I have read the list twice and now I cannot sleep.

They say rings can wait for hours before they spring. I can wait too.

I will write again. W.

Fictional correspondence and an imagined itinerary; not an experimental chronology.

NOVOSIBIRSK, 1990

Cold. Snow. A greenhouse.

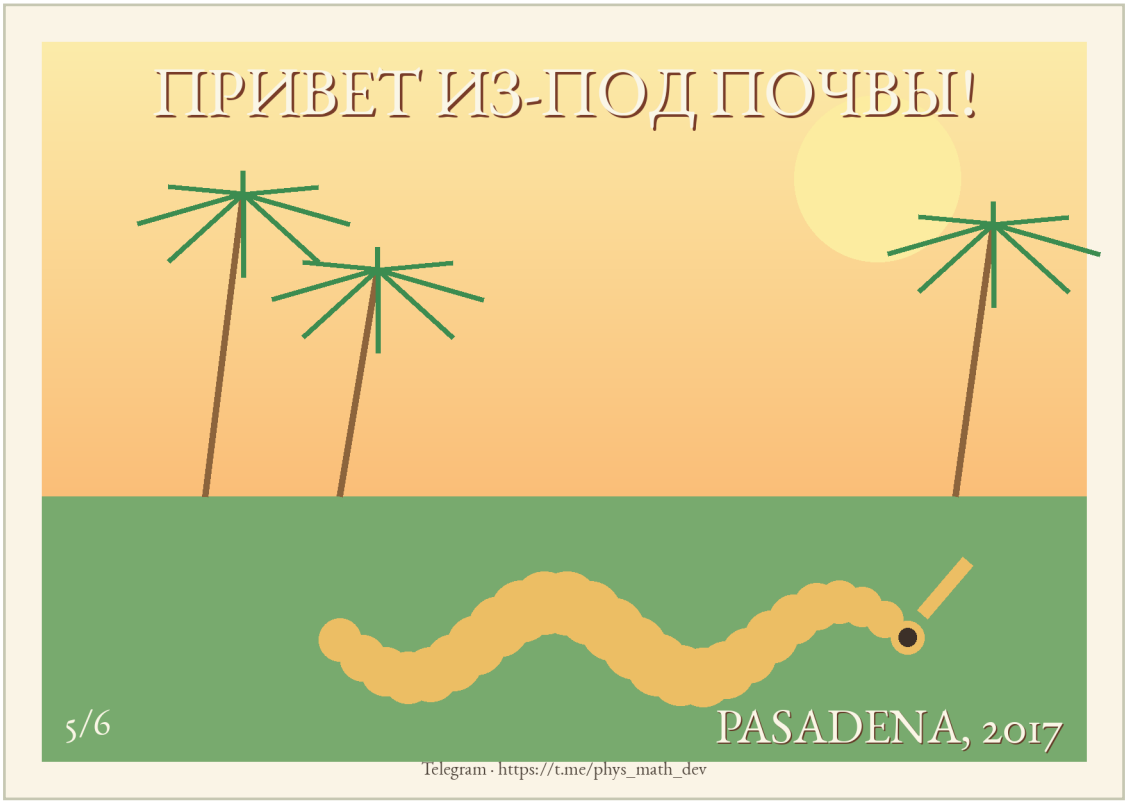

They are putting fungi under the cucumbers. The cucumbers seem pleased. We are less enthusiastic.

Apparently a fungus can wait out a very long hunger as a resting spore. I would rather go home.

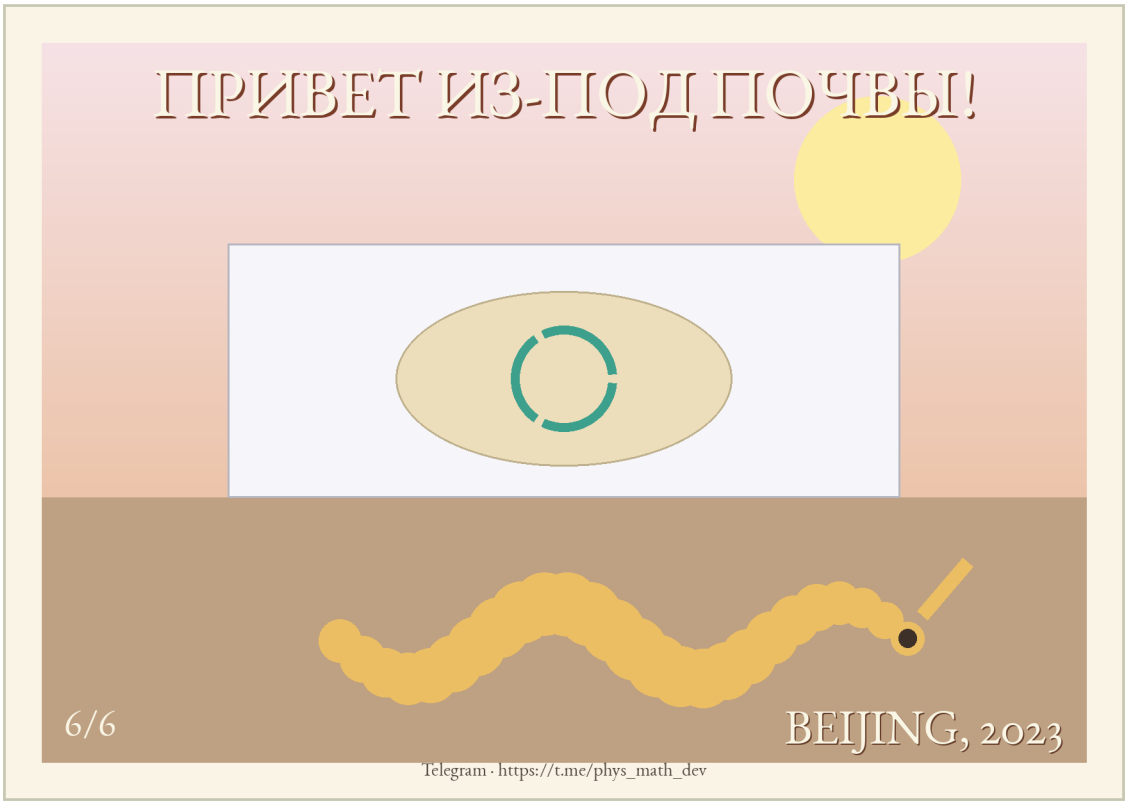

Yours, W.

PASADENA, 2017

Good news: researchers found that the fungus smells like food and mates, to lure me in.

Bad news: it smells wonderful.

Writing from behind a tree, holding my nose.

Sunshine, palms, methyl 3-methyl-2-butenoate. Yours, W.

BEIJING, 2023

Last postcard. I watched a microscopic ring inflate in a fraction of a second. Three cells, swelling inwards.

I replayed the video four times.

I have decided to become a vegetarian and live in compost.

Hugs with all the segments I do not have. W.

Fictional correspondence and an imagined itinerary; not an experimental chronology.
